### **ExaDigm Launches the PCI Approved XD2100SP Mobile Point-of-Sale Terminal**

*The Next Generation XD2100SP Represents the Most Secure Mobile Payment Terminal Available Today*

SANTA ANA, CA – January 9, 2007 – ExaDigm, Inc, the leading innovator of wireless and wired point-of-sale (POS) terminal solutions, today announced the launch of the PCI-approved XD2100SP, its next generation, PC-based, mobile point-of-sale terminal. Part of the XD2000 line of payment terminals, the XD2100SP meets the requirements of the Payment Card Industry (PCI) PIN Entry Device (PED) standard established by Visa International and MasterCard International to ensure that PIN-based payment transactions meet the highest level of security.

The XD2100SP features the same renowned fully modular design and PC-based Linux operating system as the XD2000, continuing ExaDigm's philosophy of a one technology approach delivering a single terminal platform offering multiple connectivity options, easy software upgrades, and simple configuration to adapt to new technologies. In addition to the new advanced PCI approved PED, the XD2100SP features a range of key enhancements including an Ethernet port built directly into the terminal providing a dedicated modem-neutral Ethernet back-up option, along with dial back-up as standard. The new terminal also incorporates an improved sleek ergonomic design, and has a new advanced thermal printer delivering faster print speeds.

Fully compatible with ExaDigm's current range of interchangeable modems, the XD2100SP supports IP (Ethernet), WiFi, CDMA, GSM, Bluetooth® and dial-up connections, and is preconfigured to support a series of new, advanced, multifunction modems scheduled for release in the first quarter of this year.

"ExaDigm holds the distinction of being the industry's first terminal manufacturer to implement the most exacting security standards, such as Visa CISP validation and SSL encryption, across all our payment terminal products, and the XD2100SP further demonstrates this long standing commitment to security," said Michael Mulcahy, President and COO of ExaDigm. "Unlike any other mobile payment terminal on the market today, the XD2100SP is, arguably, the most advanced, feature-rich, and secure payment terminal available for today's merchants."

Currently in production, the XD2100SP will be commercially available for purchase in the first quarter of, 2007. Due to an overwhelming demand for this new product, ExaDigm is currently accepting advanced purchase orders.

**About ExaDigm, Inc.**

ExaDigm is the leading innovator of modular IP-based wired and wireless point-of-sale (POS) terminal solutions. Through a detailed understanding of the technology, wireless and point-of-sale industries, as well as through extensive relationships with financial institutions, ISOs, and transaction processors, ExaDigm provides innovative technology-focused solutions enabling businesses worldwide to expand revenues, reduce costs and boost productivity.

Founded in 2000, ExaDigm is headquartered in Santa Ana, California, with operations around the globe. For more information, visit [www.exadigm.com](http://www.exadigm.com).
