ExaDigm Announces its Mobitex Conversion Program for Wireless Terminals Affected by the Pending Network Closure

XD2000 to Provide a Virtually Future Proof Solution Guarding Against Obsolescence Due to Changes in Technology

SANTA ANA, CA, September 27, 2006 – ExaDigm, Inc, the leading innovator of wireless and wired point-of-sale (POS) terminal solutions, today announced the launch of its Mobitex Conversion Program. Following the recent reports relating to the possible closure of Mobitex data network in the early part of 2007, ExaDigm has created a program aimed specifically at transitioning the 120,000+ terminals that would be rendered obsolete due to the network closure to the only virtually future proof wireless solution available today, the XD2000.

The program provides Merchants, ISO's, Processors and alike with the ability to transition those terminals affected by the network closure to the XD2000 Wireless Solution in a simple, cost effective way. Recognizing that the business needs of those currently operating these Mobitex terminals varied significantly, ExaDigm has created a program that can be tailored specifically to an individual company ensuring they are able to pass on the maximum benefit to their customers who will be affected by the network closure.

Those utilizing the program will have access to a range of key benefits, including:

- XD2000 Wireless Solution (CDMA or GSM)
- Bundled cellular wireless airtime plans
- Highly competitive program specific pricing options
- Tailored purchasing and deployment agreements
- Customized marketing programs
- Terminal "trade-in" program

At the center of the program is the XD2000 Wireless Solution, a terminal that has been in operation around the world for over 4 years. Unlike conversion programs being offered by other manufacturers which focus on replacing Mobitex terminals with CDMA or GSM/GPRS terminals that have the same lack of modularity, flexibility and upgradeability required to ensure they aren't rendered obsolete the next time there is a change in technology, ExaDigm is offering the only wireless terminal with all these features and more ensuring it is virtually future proof.

"Merchants and end-users should not be placed in a position whereby they are forced to bare the financial burden and inconvenience of replacing a terminal, in some cases an almost brand new terminal, simply because technology changes," said Mike Mulcahy, President and COO of ExaDigm. "Unlike any other major industry today, ours has been the slowest to adopt new technologies, especially as it relates to terminals. As a technology innovator, ExaDigm remains the only manufacturer to deliver the modularity, advanced functionality, and PC-based technology that ensures our terminals are able to adapt to changes in technology at minimal expense, in a matter of hours and so simply it can be done in the field with little or no support."

ExaDigm's Mobitex Conversion Program is available immediately to all qualifying Merchants, ISOs and Processors who are currently operating any manufacturers Mobitex wireless terminals. The XD2000 Wireless Solution is available independent of this program to all qualified purchasers.

About ExaDigm, Inc.

ExaDigm is the leading innovator of IP wireless, wired and modular point-of-sale (POS) terminal solutions. Through a detailed understanding of the IP, wireless and point of sale industries, as well as through extensive relationships with financial institutions, ISOs, and transaction processors, ExaDigm provides innovative and technology based solutions that increase revenue, reduce cost, and boost productivity.

Founded in 2000, ExaDigm is headquartered in Santa Ana, California, with operations around the globe. For more information, visit www.exadigm.com.
